GENERAL

This document contains the steps for updating Java, modifying browser settings and installing the components for webXtender. You must follow all of the steps in this document for administrative software applications such as iBanner, the Executive Dashboard, webXtender, and other associated products to work most efficiently for you.

1. If you use a Mac, please click here for instructions for using the VMWare View Client

2. Click here for instructions to install: Supported Java Release

3. Click here for instructions regarding: Modify Internet Explorer Browser Settings
   Please note: Internet Explorer is the supported browser for iBanner and Dashboard reports. You are welcome to use other browsers if you can successfully get them to work, but UTS will only support Internet Explorer.

4. Click here to install: webXtender components
   NOTE: Check your Taskbar if dialog doesn’t display
